

Details from class...

Here is the recording of class today (with my teaching gaffe omitted).

<https://youtu.be/-56YtjluiQY>

Here are the links to the files intended for class today. You should be able to at least run the code from my replit. You should be able to modify it, too, and my version won't be permanently changed.

<https://replit.com/@eteefer/SharkyMoves#index.html>

<https://replit.com/@eteefer/ClickAndMouseMoveExample#index.html>

These are the modifications to the ClickandMouseMoveExample#index.html code that we didn't make it to today.

<https://replit.com/@eteefer/CantShakeSharky#index.html>

Here is the code I committed the teaching gaffe on that is omitted from the video. I can video a better explanation of the code upon request.

<https://replit.com/@eteefer/SetTimeoutExample#index.html>

(By the way, I found out there is no "undo" in replit. I recommend copying and saving files to your own machine that you don't want permanently messed up. You can also keep track of version history of your replit file through GIT, but I won't be teaching that in class.)

The homework is ...

Read Chapter 10. Create an HTML,CSS,JS file on replit that runs any jQuery function applied to the HTML element of your choice correctly. Send me the link to your code.
