

## Homework Due October 18

We are going to finish chapter 3. Resume your reading in the *JavaScript For Kids* text on page 52 starting at FINDING THE INDEX OF AN ELEMENT IN AN ARRAY. Type in all the blue examples into your Google Chrome console. Complete either programming challenges 1, 2, and 4 on page 61 or complete challenges 1, 3, and 4. Please copy your work from the challenges and email it to me.

\*Note – <https://jsfiddle.net/d5tenggj/> is another option you may use to submit the programming challenges. Type in your JavaScript code in the lower left-hand corner. It's the same corner that has a comment about the resource I added. Save each challenge as a unique link and email the links to me. If you choose the jsfiddle option, the last line of your random insult generator will need to utilize `console.log(randomInsult);` rather than just `randomInsult;` in order to see the output.

Email me questions if you get stuck!!!

Finally, if you haven't already, choose and install your text editor. It needs to be able to save .htm or .html files. I use Notepad++. See page 78 in your text for the author's list of text editors with the website addresses to download them. I'm forecasting that we will need our text editors in class on Friday, November 1.
