

Open your Google Chrome console in your browser with:

Control-shift-j for Windows or

Command-option-j for Mac.

First, start reading in the JavaScript for Kids text starting at VARIABLES on page 17. Stop on page 27 right before CUTTING UP STRINGS. Type the examples in blue text in the book into the console as you read. Try to figure out your age in seconds on page 21, and solve the TRY IT OUT on page 23. If you have questions, send them to me. I like helping!

Finally, type this into the console pressing enter or return after each line...

```
var sillyString = "I love my homework!";  
sillyString.length;  
sillyString[18]; //should be !, the last character in the string  
sillyString[sillyString.length]; //what did you notice here?  
sillyString[sillyString.length-1]; //what did you notice here?
```
