Computer Science Homework due October 25th

1. Watch the following 15-minute clip: https://www.youtube.com/watch?v=7c9PaZzsqEg

   The easier to understand 5-minute clip we watched in class is at:

    https://www.youtube.com/watch?v=lz1uBhFvTQc

   Jot down four thoughts you could share in a class discussion. You don't have to turn them in, but you do need to be ready to discuss.

2. Read the following article:

   https://news.stanford.edu/2017/05/22/stanford-scholars-researchers-discuss-key-ethical-questions-self-driving-cars-present/

   Be ready to answer what the trolley problem is.

3. If you haven't completed the Programming Challenges from the last assignment, finish those. Get help from me via email if you need it.

4. There are only four pages of reading this week. Start your reading at chapter 4 on page 63 in your *JavaScript for Kids* text. Type in the blue examples into your Google Console. Stop at the end of page 66.

5. Get your text editor installed on the computer you bring to class before class on November 1. We might need it that soon. See page 78 in the *JavaScript for Kids* text for ideas. (I use Notepad++.)
