Homework Due Friday, November 5

This is two weeks worth of work as we don't meet for two weeks.

Read all of Chapter 5 in the *JavaScript for Kids* text. Complete the TRY IT OUT! on page 88. While you will need to save your file as an .html file in order to run it in your browser, please email me a copy of your file as a .txt file. I'll convert it back to an .html file when I receive it to test it. For those that missed class, please email me if you have any questions. I added in some extra material your reading doesn't cover.

Answer by email...

1. What is an absolute file path?

2. What is a relative file path?

3. What is a block level html element?

4. What is an inline html element?

5. Create a variable that contains an array which contains 3 elements where each element contains a goofy object (by object I mean object data type). Show me how to access a value in one of the goofy objects. Page 69 in the book can help you.
