Homework Due Friday the 18ᵗʰ

Add any function to the JavaScript library, myFirstJavaScriptLibrary.js (or whatever you named yours in class). This function can be one you create yourself or can be one we've already coded together in class. Make sure to test your function in the console before adding it to the library, and the library gets saved with the new function in it as a .js file. In the same folder as your JavaScript library, create a new file called MyLibraryDemo.html in your text editor. Add the HTML below, and add between the second set of script tags your code to call your new function and hopefully display something to the console or document. Don't forget to save your HTML file when you finish. Find the HTML file in your file system. Double click on the browser icon next to the file name to run it in your browser. Show me your work in class this Friday. Email me your questions.

```
<!DOCTYPE html>

<html>

 <head>
   <title>My Library Demo</title>
 </head>

 <body>

 <script src = "./myFirstJavaScriptLibrary.js"></script> <!--Make sure the filename matches yours-->

 <script>

 //enter your code to call your newly added function in your library here

 </script>

 </body>

</html>
```
